

1. Fill in the blanks with appropriate words/phrases. [1*7 = 7]
- The study of Artificial Intelligence started at the ____
 - ____ is an area in which AI has made significant progress
 - Systems that ____ are designed on the basis of cognitive modeling; systems that ____ are designed to pass the Turing test.
 - Infinite domain CSP can be solved using ____ algorithms
 - Local search techniques can be used when ____.
 - A heuristic function is said to be admissible if it never ____.

2. Differentiate between the following pairs and give examples for each. [2*5=10]

- Ideal rational agent and omniscient agent
- Dynamic and stochastic environment
- Unary and binary constraints
- Strong AI and weak AI
- Informed and uninformed search

3. Consider the following graph and apply the search techniques listed below to find a path from A to G. Draw the search trees until the solution is found and compute the cost of the final path. [4*2=8]

- Uniform cost search
- Bidirectional search
